

Dr. Hans-Peter Ebert

is Head of the Energy Efficiency Division at the Bavarian Center for Applied Energy Research in Würzburg. He studied physics at the Julius-Maximilians-University of Würzburg and received his PhD in 1995. His scientific field of activity is the understanding of heat transport in thermal superinsulations and thermophysical measurement methods to determine thermal conductivity. From 2005 to 2008 he was network coordinator of a Federal Ministry of Research research network for the development of highly efficient latent heat storage materials. During the same period he was German representative in the project "Connecting Energy Clusters across Europe (CENCE)" in the 6th EU Framework Programme. He is head of the German Thermophysical Working Group. He is author of more than 80 scientific publications, acts as a reviewer for national and international funding agencies and scientific journals and is a member of various national and international conference committees. He is also a member of the German Physical Society, of the Industry, Technology and Research Committee of the Chamber of Industry and Commerce and of the Advisory Board of the Technology and Start-up Center Würzburg.
